LOCATION	Tucson, AZ
POSITION	Commercial HVAC Service Technician
CERTIFICATIONS	Trane Class One Technician EPA Type I EPA Type II
SALARY REQUIREMENT	\$35/hour
RELOCATION	No
START DATE	2 weeks from offer

CANDIDATE OVERVIEW

This candidate is an experienced HVAC Service Technician with approximately 12–13 years in the HVAC trade, including an estimated 9+ years of commercial service experience. His background includes commercial and residential HVAC service, troubleshooting, installation, refrigeration, electrical systems, airflow diagnostics, ductwork, furnaces, heat pumps, mini-splits, equipment change-outs, and system start-up. He also brings extensive electrical experience, providing him with a particularly strong foundation for diagnosing electrical and controls-related HVAC issues. His resume specifically identifies HVAC diagnostics, refrigeration, circuit troubleshooting, motor controls, electrical testing, power distribution, commercial wiring, and blueprint reading among his core technical skills.

His career progression has included new construction, installation, quality control, lead technician responsibilities, and commercial service. He spent approximately 10 years with Riteway Heating & Cooling, where he worked in quality control and field leadership, checking HVAC installations, reading prints, laying out crews, monitoring project quality, and helping keep projects within budget. He later served as a Lead Technician with Coolbreez Cooling & Heating, running service calls, reading schematics, and installing HVAC systems in both commercial and residential facilities.

From a service standpoint, he is experienced troubleshooting refrigerant issues, electrical problems, airflow concerns, system failures, and equipment replacement/change-outs across a variety of conventional HVAC equipment. His electrical background includes conduit, wiring, panel upgrades, power distribution, schematics, motor controls, and system troubleshooting, giving him a well-rounded understanding of both the mechanical and electrical sides of HVAC equipment. While he has limited direct chiller experience, he is interested in expanding into heavier commercial refrigeration and chiller systems and is willing to obtain additional certifications as needed.

KEY STRENGTHS

- 12+ years of HVAC experience with approximately 9+ years of commercial service exposure
- Strong combination of HVAC and electrical troubleshooting experience
- Trane-trained technician with EPA Type I & II certifications
- Extensive experience with commercial/residential service, installation, troubleshooting, and equipment change-outs
- Strong electrical background including wiring, schematics, motor controls, panels, conduit, and power distribution
- Approximately 10 years with Riteway Heating & Cooling in QC and field leadership capacities
- Experienced reading prints and schematics and troubleshooting HVAC systems from both the mechanical and electrical side
- Willing and interested in expanding into refrigeration and chiller service

SKILLS CHECK LIST

- Commercial HVAC Service
- HVAC Diagnostics & Troubleshooting
- Refrigeration
- Air Conditioning & Heating Systems
- Heat Pumps
- Gas Units
- Mini-Splits
- Equipment Change-Outs
- Airflow Diagnostics
- Ductwork
- Electrical Troubleshooting
- Electrical Schematics
- Motor Controls
- Circuit Troubleshooting
- Electrical Testing
- Commercial Wiring
- Power Distribution
- Panel Upgrades
- Conduit & Wiring
- Blueprint Reading
- HVAC Installation & Start-Up
- Quality Control
- Crew / Field Leadership
