CANDIDATE OVERVIEW

This candidate is a journeyman electrician with 20+ years in commercial and industrial electrical construction, progressing from foreman to field supervisor to superintendent. He is currently Superintendent on an approximately $12M addition project. His project history includes high-rise hotels, hospitals, schools, shopping malls, and retail new builds and remodels for national grocery, department store, and big-box retailers.

As a Foreman with a regional electrical contractor for 12 years, he ran new-build projects including an approximately $25M department store project, directing 17 to 20 electricians and sharing oversight of 40+ electricians with two other foremen on his largest job. As Superintendent with a commercial electrical contractor, he oversaw large commercial and government projects including public school work, supervised foremen and superintendents across multiple job sites, hired and mentored field staff, and coordinated with customers and estimators on cost-effective installations. He reads and interprets blueprints and manages scheduling, payroll, and reporting.

He also brings quality control and medium voltage experience from an LNG export facility with an industrial electrical contractor, where he inspected wiring, lighting, motors, and generating equipment; performed insulation resistance, continuity, voltage, ground, and functional testing; wrote nonconformance reports; and worked as a Medium Voltage Terminator/Foreman. He is open to Electrical Superintendent and General Superintendent opportunities.

KEY STRENGTHS

- 20+ years in commercial and industrial electrical construction
- Superintendent on projects up to $12M; Foreman on projects up to $25M
- Supervised foremen and superintendents across multiple job sites
- Directly led 17 to 20 electricians; shared oversight of 40+ on largest job
- Hospitals, schools, high-rise hotels, malls, and national retail
- Electrical QC and medium voltage terminations on an LNG export facility

SKILLS CHECK LIST

- Journeyman Electrician License
- High, medium, and low voltage systems; MV terminations
- Insulation resistance, continuity, voltage, ground, and functional testing
- Installation inspection and nonconformance reporting
- Blueprint reading; scheduling, payroll, and reporting
- OSHA certified; PlanGrid; aerial lift, forklift, and excavator certified
