SALARY REQUIREMENT	Hourly; open to discussing full package
RELOCATION	Open to travel; prefers assignments with regular time at home
START DATE	Current contract assignment ends in December; available to interview now

CANDIDATE OVERVIEW

This candidate is an AWS Certified Welding Inspector and API 1169 Pipeline Construction Inspector with 25+ years in pipeline, compressor station, and industrial piping construction. He progressed from laborer to pipeline welder, lead welder, welding supervisor, welding inspector, and superintendent. He is currently Superintendent for a pipeline services contractor on a contract pipeline project that includes excavating a 36-foot bellhole to replace pipeline sections. That assignment ends in December, and he is seeking a long-term role closer to home.

His inspection experience includes welding inspector roles with a major midstream operator, a West Coast utility, and a national inspection firm. He has inspected fit-up, root and cover passes, heat treatment, tie-in welds, fabrication, and in-service welding; verified heat numbers, materials, and welder qualifications; and witnessed RT, MT, PT, UT, hydrostatic, strength, leak, and nitrogen testing. He prepares daily and weekly inspection reports, maintains weld logs, builds weld and heat maps in Bluebeam, and reviews WPSs, MTRs, pipe tallies, and NDT reports for closeout and turnover. He works to API 1104, ASME B31.3, and 49 CFR Part 192.

As a superintendent and welding supervisor, he directed installation of pipeline heaters, meter skids, facility piping, valves, and compressor station piping modifications. He coordinated foremen, subcontractors, and NDT personnel, documented deficiencies, and drove corrective actions through hydrostatic testing and mechanical completion. He is accustomed to six-day schedules and is open to travel, with a preference for work that allows regular time at home.

KEY STRENGTHS

- AWS CWI and API 1169 Pipeline Construction Inspector
- 25+ years in pipeline, compressor station, and industrial piping construction
- Welded piping inspection, NDT coordination, and hydrostatic test oversight
- Turnover documentation: weld maps, test packages, MTRs, NDT reports
- Field leadership as Superintendent and Welding Supervisor through mechanical completion
- Accustomed to six-day schedules; open to travel

SKILLS CHECK LIST

- AWS CWI; API 1169 Pipeline Construction Inspector (exp. 2028)
- Codes: API 1104, ASME B31.3, 49 CFR Part 192
- Visual weld inspection: fit-up, root and cover passes, heat treatment, in-service welding
- NDT coordination: RT, MT, PT, UT; RT film review
- Hydrostatic, strength, leak, air, vacuum, and nitrogen testing
- Bluebeam; Microsoft Office; OSHA 30; HAZWOPER
